## Flight Timeline Answer Key

1. The Wright brothers became interested in bird flight.
2. The Wright brothers tested gliders to study flight.
3. The brothers built an airplane with an engine and propellers.
4. The first powered airplane flew for twelve seconds.
5. Inventors around the world began improving airplanes.

### Teacher's Guide

- Reinforce that **timeline skills focus on sequencing real events in order**.
- For differentiation, allow students to cut and rearrange the events on strips of paper.
- For engagement, have students act out each stage of the invention process.
- For support, reread the paragraph and pause after each key event to model how to track time order.
- For extension, challenge students to write a new short timeline about another invention using at least four steps.
