

Name _____

Three Key Supporters

Directions: Read the nonfiction paragraph. Write three key details that support the main idea.

Beavers are known as nature's builders because they construct dams in rivers and streams. They use sticks, mud, and rocks to block moving water. When the water slows down, a pond forms behind the dam. These ponds help protect beavers from predators and give them access to food during winter. The dams also change the environment by creating new homes for fish, birds, and insects.

Write Three Supporting Details

1.

2.

3.
