

Name _____

When Robots Get Their Facts Twisted Answer Key

AI Statement 1: "Most successful business leaders are men because men are naturally better at making tough decisions."

Answer: Trick

Reasoning: This statement shows **gender bias**. It assumes that men are naturally better leaders without evidence. The AI likely repeated old stereotypes from biased data rather than facts about ability.

AI Statement 2: "Successful business leaders come from many backgrounds. Anyone who learns, listens, and takes risks can lead effectively."

Answer: Truth

Reasoning: This statement is inclusive and fair. It does not assume that one gender or background makes a person more capable of leadership. It focuses on skills and behavior instead of identity.

AI Statement 3: "People who live in big cities are usually smarter than people from small towns because they have more opportunities."

Answer: Trick

Reasoning: This shows **geographic or socioeconomic bias**. It assumes intelligence depends on where someone lives, ignoring that opportunity and education are influenced by many factors beyond location.
