

Name _____

When Words Get Snarky!

Artificial Intelligence (AI) can write stories, give opinions, and describe people - but its word choices can sometimes reveal hidden bias. Words like *bossy* and *assertive* or *emotional* and *passionate* can make the same behavior sound totally different, depending on who's being described.

In this activity, you'll read a few short AI-generated descriptions of people. Each set shows two ways the AI described the same person - one with subtle bias, and one more neutral or fair. Your job is to **spot the bias**, explain how the wording changes the meaning, and **rewrite** the biased version to make it neutral.

Example

Biased Sentence: "Ms. Carter is *bossy* when she leads her team meetings."

Fair Rewrite: "Ms. Carter is *confident and organized* when she leads her team meetings."

Challenge 1: The Leader

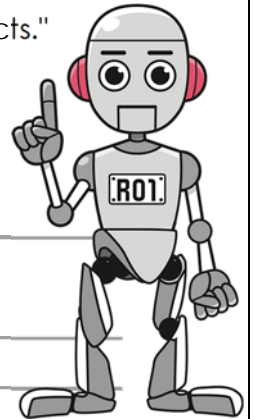

AI Version A: "Jordan is *pushy* and always tries to take charge when the group works on projects."

AI Version B: "Jordan is *assertive* and helps the group stay on track during projects."

Your Tasks:

1. Which version sounds more fair or positive? _____
2. How does the word choice change how you see Jordan?

3. Rewrite Version A so it's fair and balanced:

Challenge 2: The Employee

AI Version A: "Taylor is a *quiet worker* who doesn't share many ideas during meetings."

AI Version B: "Taylor is a *thoughtful worker* who prefers to listen before speaking in meetings."

Your Tasks:

1. Which version sounds more respectful? _____
2. What message might the biased wording send about Taylor's value?

3. Rewrite Version A so that it shows fairness and appreciation:
