How Headlines Hook, Hype, and Sometimes Hide the Truth

Artificial Intelligence (AI) can write news titles, social media posts, and headlines faster than any human. But speed doesn't always mean fairness. Sometimes AI - like people - uses loaded or emotional language to grab attention. That's called **bias**.

Your mission: become a **Headline Detective**. Read each group of four possible headlines below. One of them shows **clear bias** - it uses exaggerated, emotional, or one-sided language that could influence readers unfairly. Circle the title that has **bias**, then explain how you know.

Round 1: Tech Trouble

A. "AI Helps Doctors Detect Illness Faster Than Ever"
B. "Hospitals Using New AI Tools to Improve Patient Care"
C. "Artificial Intelligence Is Revolutionizing Medicine"
D. "Robots Are Taking Over Hospitals - Should Humans Even Bother?"

Which title has bias? _____ **Why is it biased?**

_____

_____

Round 2: School Smarts

A. "Study Finds Students Learn Faster With Online Tools"
B. "Teachers Use AI to Personalize Learning"
C. "Lazy Students Now Let Chatbots Do Their Homework"
D. "New Technology Changes the Way Kids Study"

Which title has bias? _____ **Why is it biased?**

_____

_____

Round 3: Environment Edition

A. "AI Helps Farmers Predict Weather and Save Water"
B. "Researchers Develop AI to Track Climate Change Patterns"
C. "Tech Giants Pretend to Care About the Planet With Fake Green Apps"
D. "Scientists Use AI to Study Drought Conditions"

Which title has bias? _____ **Why is it biased?**

_____

_____
