

Name _____

Rounding Match Answer Key

1. G
2. E
3. J
4. A
5. F
6. H
7. I
8. D
9. B
10. C

Teacher's Guide

- Review one example together before students begin matching independently.
- Encourage students to round each decimal first before looking at the answer choices.
- For students needing support, provide a place value chart and have them underline the target digit.
- Turn the activity into a partner challenge by having students explain why each match is correct.
- Challenge advanced students to write one new decimal for each answer in Column B that would round to the same value.
- Extend the lesson by having students create their own matching puzzle for a classmate using different decimals and place values.
