

Name _____

Measure and Round Answer Key

1. 2 feet
2. $\frac{1}{2}$ liter
3. 5 pounds
4. $3\frac{1}{2}$ yards
5. 2 quarts
6. $2\frac{1}{2}$ pounds
7. $5\frac{1}{2}$ feet
8. 1 gallon

Teacher's Guide

- Quick implementation: Review how fractional parts can be rounded to 0, $\frac{1}{2}$, or 1. Remind students to keep the measurement unit in each answer.
- Differentiation: For support, provide a number line divided into halves. For a challenge, ask students to identify whether each estimate is greater than or less than the exact measurement.
- Engagement: Have students identify the length, capacity, and weight measurements before solving, then compare which category has the largest estimates.
- Extension: Ask students to write three realistic measurements from everyday objects and round each to the nearest whole or half unit.
