6	930,750	930,700	931,000	930,000

Teacher's Guide

- Begin by modeling how the same number changes when rounded to different place values.
- Encourage students to work from the smallest place value to the largest and compare the results.
- Provide a place value chart for students who need additional support identifying the rounding digit.
- Ask students to explain why some rounded answers stay close to the original number while others change more.
- Have pairs compare one row and discuss how each place value affects the result.
- Extend the activity by having students choose a six digit number and create a new row for a classmate to complete.
