3. True
4. True
5. False. Correct: $320 < 330$.
6. True
7. True
8. True
9. False. Correct: $680 = 680$.
10. True

Teacher's Guide

- Read the first statement together and model how to check both the rounding and the comparison.
- Remind students to verify the rounded values before deciding if the comparison is correct.
- Encourage students to explain why each false statement is incorrect.
- Provide a place value chart or number line for students who need extra support.
- Have pairs compare answers and justify any corrections they made.
- Challenge early finishers to write two true statements and two false statements for a classmate to solve.
- Discuss how checking work step by step helps catch rounding and comparison errors.
