Name _____

Salary Stories Answer Key

1. $4,500
2. $62,400
3. $2,600
4. $70,200
5. $3,400
6. $78,000

Teacher's Guide

- Quick implementation: Review the key operations before beginning. Divide annual salary for periodic pay, multiply periodic pay for annual salary, and use percent multiplication for raises.
- Differentiation: Have students underline the salary amount and circle the pay frequency or raise percentage before solving.
- Engagement: Assign each problem as a fictional payroll request and have students act as payroll specialists checking the employee's pay.
- Extension: Ask students to rewrite two problems using different salaries or pay frequencies, then solve their new versions.
