

Name _____

Crystal Ball or Curveball? Guess AI's Next Move!

Short prompts give the AI very little direction, which can lead to creative, but sometimes unexpected results. Long prompts give more detail, making the AI's response clearer and more predictable. The challenge is to see how the outputs might differ.

Directions - Read each pair of prompts. Predict how the AI's answers would be different for the short prompt compared to the long prompt. Write your ideas in the space provided.

Example: Short Prompt: *"Write about a dog."*

Long Prompt: *"Write a 3-paragraph story about a golden retriever who finds its way home after being lost. Use a hopeful and cheerful tone, and end with the family celebrating."*

Predicted Difference: The short prompt might give a random description of a dog, while the long prompt will create a structured story with a specific ending.

1. Short Prompt: *"Summarize World War II."*

Long Prompt: *"Summarize World War II in 5 sentences, focusing only on the causes of the war. Leave out details about battles or weapons."*

Predicted Difference: _____

2. Short Prompt: *"Write a poem about the rain."*

Long Prompt: *"Write a 12-line poem about the calming effect of gentle rain. Use descriptive imagery and end the poem with a hopeful message about growth."*

Predicted Difference: _____

3. Short Prompt: *"Give me tips for healthy eating."*

Long Prompt: *"Give me 5 tips for healthy eating, each written in one sentence. Include at least one tip about fruits, one about water, and one about portion control."*

Predicted Difference: _____

4. Short Prompt: *"Tell me a joke."*

Long Prompt: *"Tell me a school-appropriate, one-sentence joke that uses a play on words."*

Predicted Difference: _____
