

Eco Pressures Answer Key

1. Forests are cleared for farming and cattle ranching.
2. Mining can cause pollution that harms rivers and soil.
3. Rising sea levels and stronger storms threaten coastal towns.
4. Because communities must meet economic needs while also protecting natural environments.
5. They use sustainable practices and work with conservation efforts.
6. Because the environment provides resources, habitats, and long term stability that support both people and ecosystems.

Teacher's Guide

- Ideal for grades 6 to 12 to build analytical reading skills about real world issues.
- Encourage students to underline key phrases in the passage before answering.
- Use this worksheet to introduce or reinforce lessons on environmental geography.

Differentiation Tips

- Provide guiding questions or sentence starters for struggling readers.
- Allow advanced students to write extended responses or connect the passage to global environmental issues.
- Offer vocabulary support for terms like conservation, carbon, shoreline, and sustainable.

Engagement Ideas

- Begin with a quick class discussion on why environmental issues matter in South America.
- Display images of the Amazon, Andes, and coastlines to help students visualize the regions mentioned.
- Create small groups to compare answers and explain which parts of the text support their responses.
