

Name \_\_\_\_\_

## Frozen Vocabulary

**Directions:** Match each Southern Ocean term to the correct definition by writing the letter of the definition beside each word.

\_\_\_\_\_ 1. Krill

\_\_\_\_\_ 2. Pack ice

\_\_\_\_\_ 3. Circumpolar

\_\_\_\_\_ 4. Ice shelf

\_\_\_\_\_ 5. Sea ice

\_\_\_\_\_ 6. Current

\_\_\_\_\_ 7. Antarctic Convergence

\_\_\_\_\_ 8. Iceberg

\_\_\_\_\_ 9. Leopard seal

\_\_\_\_\_ 10. Climate zone

A. A floating mass of frozen seawater that forms during winter and melts in warmer months.

B. A huge chunk of freshwater ice that has broken off from a glacier or ice shelf and drifts in the ocean.

C. A layer of frozen seawater that builds up and moves together as a large sheet.

D. A small shrimp-like creature that is a key food source for whales, penguins, and seals.

E. A region where colder Southern Ocean waters meet warmer northern waters.

F. Extending or moving all the way around a pole or continent.

G. A long, shelf-shaped extension of ice that forms where a glacier reaches the ocean.

H. A powerful marine predator that lives in icy waters and hunts penguins and fish.

I. A flowing body of water within the ocean that moves heat, nutrients, and animals.

J. A large area of Earth with similar temperature and weather patterns.
