

Name _____

News or Noise?

Every day, you scroll past headlines and news snippets. But here's the problem: not all of them come from real reporters. Some are written by Artificial Intelligence (AI), designed to get clicks-not to tell the truth. Your job is to figure out which stories sound like **credible news** and which ones are **AI-generated noise**.

Directions - Read each news snippet below. Underline any suspicious details, exaggerations, or odd wording. Decide if it's **News (credible summary)** or **Noise (AI clickbait)**. Write one sentence explaining your decision.

Snippet 1 - *"Scientists at the University of Colorado discovered a new planet orbiting a nearby star. The planet, about twice the size of Earth, may have conditions that support liquid water. The findings were published this week in the journal Astronomy Now."*

Your Choice: News ☐ Noise ☐ **Why?** _____

Snippet 2 - *"Shocking new space discovery will blow your mind! Experts say a super-Earth has been found that could change everything we know about life. This planet is already being called the next Earth 2.0—don't miss the details that everyone is talking about!"*

Your Choice: News ☐ Noise ☐ **Why?** _____

Snippet 3 - *"The mayor announced a new plan to add 200 electric buses to the city fleet by 2026. The project aims to reduce air pollution and provide quieter, cleaner transportation for commuters."*

Your Choice: News ☐ Noise ☐ **Why?** _____

Snippet 4 - *"This jaw-dropping transportation project is changing your city forever. Thousands of new eco-buses are coming sooner than you think, and the shocking reason behind the switch will leave you speechless!"*

Your Choice: News ☐ Noise ☐ **Why?** _____

Reflection Question - What are two **red flags** that make a news story sound more like "noise" than real reporting?
