Claim And Key Points

Directions: Read the passage. Identify the **central claim** and write the **three most important supporting points**.

Over the past few years, electric scooters have become common in many cities. Supporters of scooter programs argue that they provide an easy way for people to travel short distances without using cars. Riders can rent scooters using phone apps and leave them near their destination. City leaders also point out that scooters reduce traffic congestion and lower air pollution. In addition, scooter programs often cost less to operate than adding new bus routes. For these reasons, many local governments continue to expand scooter programs despite concerns about sidewalk safety and storage.
