Directions: Read the paragraph carefully. Underline all the supporting details that help explain or prove the main idea.

The Living Classroom

The school garden has become one of the most exciting learning spots on campus. Students visit it every week to observe how different plants grow. They also record changes in leaf size, color, and height in their science notebooks. Teachers often use the garden to show how insects help flowers bloom. Many classes even taste the vegetables they helped plant earlier in the year. Because of all these activities, the garden helps students learn science in a hands-on way.
