

Green Leadership Answer Key

(Answers will vary, but should include the following key ideas.)

- Sweden invests heavily in **renewable energy**, including hydropower, wind energy, and bioenergy.
- The country has strong **government policies** that encourage recycling, reduce waste, and promote clean transportation.
- Swedish culture values **environmental responsibility**, and citizens participate actively in recycling and energy saving practices.
- Sweden supports **green technology innovation**, such as electric vehicles, sustainable building design, and resource efficient industries.
- National goals focus on reducing carbon emissions, protecting forests and waterways, and moving toward a low waste society.

Teacher's Guide

- Before students begin writing, review key sustainability concepts and highlight bold terms.
- Encourage students to brainstorm ideas or create a quick outline.
- After writing, allow peer review to help students refine clarity and reasoning.

Differentiation Tips

- Provide sentence starters or guiding questions for students who need structured support.
- Allow advanced learners to add data, examples of Swedish companies, or comparisons with other countries.
- Offer verbal planning time for students who benefit from discussing ideas before writing.

Engagement Ideas

- Show short video clips or images of Sweden's recycling stations, wind farms, or public transit systems.
- Lead a class discussion about what sustainability looks like in the students' own community.
