## From Notes To Report

**Directions:** Read the informal field notes below written by a student during a science experiment. Rewrite them as a short **professional-style field report**, using **precise scientific terminology** and a formal tone.

So, we mixed some baking soda and vinegar, and it started bubbling right away. The gas that came out made the balloon puff up. The cup also felt kinda cold after a while. We figured the gas was the same stuff we breathe out when we exhale. It was cool to see the reaction happen fast!

### Helpful Terms You Might Use:

chemical reaction

gas production

hypothesis

carbon dioxide

reactants

analysis

endothermic

observation
