

Tech Term Quest Answer Key

1. Circuit → A
2. Sensor → C
3. Algorithm → B

Teacher's Guide

- **Skill Focus:** Understanding **technical terms** through **context clues** and real-world application.
- **Differentiation Tips:**
 - For younger or emerging readers, pre-teach the words using visuals (e.g., a photo of a robot's circuit board).
 - For advanced students, encourage them to identify additional technical terms they know from science or technology.
- **Engagement Ideas:**
 - Have students draw or label parts of a simple robot and include their own "mini glossary."
 - Turn this into a class challenge: invent a new robot and define five technical terms that would describe how it works.
- **Extension Activities:**
 - Encourage students to write their own paragraph using three new technical terms from a different field (e.g., medicine, sports, or computers).
 - Create a "Tech Word Wall" in class, adding new terms each week as students encounter them in reading or experiments.
