

Name _____

Answer Key: Comparing AI Companies (Sample Answers)

Company	Main Goals	Key Products / Achievements	Approach / Strategy
OpenAI	Ensure artificial general intelligence (AGI) benefits all of humanity	ChatGPT (language model), DALL·E (image generation), AI safety research	Build powerful AI tools but balance with safety and ethical research
DeepMind	"Solve intelligence" to help solve global challenges like climate change or disease	AlphaGo (beat world champions in Go), AlphaFold (protein structure prediction)	Focus on scientific breakthroughs and long-term benefits of AI
Anthropic	Develop safer, more interpretable, and controllable AI systems	Claude (AI assistant similar to ChatGPT)	Prioritize safety, responsibility, and making AI behavior more predictable
NVIDIA	Provide the hardware and software foundation for AI	GPUs (chips powering AI models), AI platforms for robotics, self-driving, and research	Enable AI development through advanced technology infrastructure

Reflection Question (Sample Response)

I think **NVIDIA** will have the biggest impact on the future of AI because its technology is used by almost every other AI company. Without powerful GPUs, companies like OpenAI and DeepMind would not be able to train their large models. NVIDIA also develops software tools that help AI researchers in robotics and medicine. Since it provides the "engines" behind AI, its influence spreads across the entire industry, not just in one product.
