

OpenAI

OpenAI is an American artificial intelligence company founded in 2015 with the mission to ensure that artificial general intelligence (AGI) benefits all of humanity. The company began as a nonprofit research lab, created by a group of entrepreneurs and researchers who wanted AI development to be open and safe. In its early years, OpenAI focused on publishing research and sharing knowledge freely.

Over time, the company shifted to a “capped-profit” model in order to raise money for large-scale projects. OpenAI is best known for creating powerful AI systems such as **ChatGPT**, a language model that can carry on conversations, and **DALL·E**, which generates images from text descriptions. These tools have brought AI into everyday life, with millions of people using them for work, learning, and creativity.

In addition to creating products, OpenAI invests heavily in **safety research**. The company studies how to reduce risks such as bias, misinformation, and harmful uses of AI. OpenAI also works with policymakers and the public to shape how AI should be regulated and used responsibly. Today, OpenAI is one of the most influential companies in the AI industry, balancing innovation with the goal of keeping AI safe and beneficial for everyone.

Multiple Choice Questions

1. When was OpenAI founded?

- A. 2015 B. 2018 C. 2020 D. 2022

2. What was OpenAI's original structure when it was created?

- A. A for-profit company B. A nonprofit research lab
