

Who Could Replace This Job? Answer Key

1. Doctor → *Both*.

- AI could help with diagnosis, reading X-rays, and suggesting treatments.
- Robots could assist with surgery.
- However, human doctors are still important for empathy, communication, and complex decisions.

2. Factory Worker → *Robotics (and sometimes Both)*.

- Robots can lift heavy parts and repeat tasks with precision.
- AI can help with quality control and spotting defects.
- Many factory jobs have already been partly replaced by machines.

3. Teacher → *AI (with limits)*.

- AI could answer questions, grade papers, and give personalized practice.
- But teachers do more than share knowledge—they encourage, inspire, and manage classrooms.
- Unlikely to be fully replaced.
