## Fishermen, Sailors, And Tide Knowledge

Tides are the daily rise and fall of ocean levels caused mostly by the Moon's gravity, with some influence from the Sun. These changes affect when water is deep enough for boats to travel safely and when fishing is most successful. People who work on the sea, like fishermen and sailors, must pay close attention to the tide cycle.

**Question:** Imagine you are a fisherman or sailor living in a coastal town. Write a short paragraph (4-5 sentences) explaining why knowing about tides is important for your job. Include how tides affect travel, safety, and daily activities.

---

**Reflection Extension:** Do you think modern technology makes tide knowledge less important, or do people still need to understand natural tidal patterns? Explain your opinion in 2-3 sentences.
