

Name _____

When ChatGPT Puts on a Costume

Every time you assign ChatGPT a *role*, you're handing it a brand-new identity - like giving it a costume and script. A scientist speaks differently than a comedian. A teacher explains differently than a travel guide. Your job: become a **Role Analyst** and predict how ChatGPT's *voice, tone, and content* would shift when the same topic is approached from different perspectives. For each prompt below, read the assigned role, imagine how the response would sound, and describe how that role changes what the AI might say and how it would say it. In short - when you change the *role*, how does the *vibe* change?

Prompt #1: The Teacher - "As a teacher, explain why reading every day can improve a student's writing skills."

Predicted Voice and Tone: → _____

Predicted Content Style: (What kinds of examples or explanations would a teacher use?)

→ _____

How This Role Shapes the Response: → _____

Prompt #2: The Coach - "As a coach, motivate students to keep trying even when learning feels difficult."

Predicted Voice and Tone: → _____

Predicted Content Style:

→ _____

How This Role Shapes the Response: → _____

Prompt #3: The Scientist - "As a scientist, describe how curiosity drives discoveries in the world."

Predicted Voice and Tone: → _____

Predicted Content Style:

→ _____

How This Role Shapes the Response: → _____
