Name _____

Predicting the Weather Report of Words

You've heard of weather forecasters who predict rain or sunshine - now it's time to become an **Output Forecaster**, predicting what kind of *writing storm* ChatGPT will produce from a given prompt. Every well-crafted prompt has built-in "forecast clues": tone, structure, and key details the AI is likely to include. Your mission is to read each complex prompt below and *forecast* what the AI's response would look and sound like. Describe the likely **structure** (how it's organized), **tone** (the mood or attitude), and **key details** (the content or stylistic elements you expect to appear). Then, explain *why* those predictions make sense based on the prompt's wording.
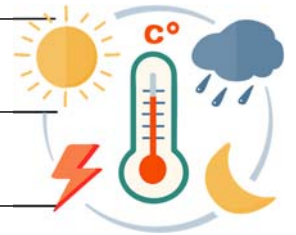

Prompt #1: "Write a news report about an alien visiting Earth, including quotes and eyewitness accounts."

Predicted Structure: → _____

Predicted Tone: → _____

Predicted Key Details: → _____

Reasoning: → _____

Prompt #2: "Compose a speech given by a historical figure warning the future about the dangers of technology."

Predicted Structure: → _____

Predicted Tone: → _____

Predicted Key Details: → _____

Reasoning: → _____

Prompt #3: "Write a diary entry from the perspective of a sea turtle traveling across the ocean."

Predicted Structure: → _____

Predicted Tone: → _____

Predicted Key Details: → _____

Reasoning: → _____
