## Prompt Sorting Machine

Every ChatGPT prompt is like pushing a mysterious button on a high-tech vending machine - you don't know *exactly* what's coming out, but you can usually guess the *type* of product it'll deliver. Your job: become the **Output Classifier 3000**, the ultimate human intelligence system trained to identify what kind of response a given prompt will produce.

Read each prompt carefully and decide what kind of **output format** ChatGPT would most likely generate - for example: **essay, list, poem, summary, email, dialogue, story, report, set of instructions, joke, letter, review, social media post, news article, or reflection.**

Then, explain *why* you classified it that way and what *clues in the wording* helped you decide. Remember: a great classifier doesn't just guess - they *justify their logic like a pro coder debugging the universe.*

**Output Types Reference Bank** - (*You may use these or invent your own if you think another fits better!*)

Essay | List | Poem | Story | Dialogue | Summary | Email | Letter | Instructions  
| Review | News Article | Speech | Reflection | Joke | Interview | Description

**Prompt #1** - "Write three steps for making your morning routine more efficient."

**Predicted Output Type:** \_\_\_\_\_

**Reasoning:** → \_\_\_\_\_

**Clues in the Prompt:** → \_\_\_\_\_

**Prompt #2** - "Describe a thunderstorm from the perspective of the wind."

**Predicted Output Type:** \_\_\_\_\_

**Reasoning:** → \_\_\_\_\_

**Clues in the Prompt:** → \_\_\_\_\_

**Prompt #3** - "Write a persuasive piece arguing that schools should start later in the morning."

**Predicted Output Type:** \_\_\_\_\_

**Reasoning:** → \_\_\_\_\_

**Clues in the Prompt:** → \_\_\_\_\_
