The Trust Blueprint Answer Key

Designing a Trust Blueprint

Sample "Trust Factors" students might select:
Accuracy, Transparency, Bias Awareness, Privacy & Safety, Human Oversight, Purpose & Impact, User Control, and Consistency.

Encourage students to include their own additional ideas such as *Accountability, Accessibility, Empathy, or Sustainability* - these can make great discussion points.

Sample Definition of Trustworthy AI:

"A trustworthy AI gives information that is mostly accurate, admits what it doesn't know, and is open about how it works. It should protect my privacy, avoid bias, and be used to help people - not manipulate or mislead them. I should always be able to question or challenge it."
