Name _____

An Advice Column for the Age of Algorithms Answer Key

1. Dear AI - The Ignoring Friend

Should this person trust AI's advice?
Only partly. AI can suggest calm, logical ways to handle communication issues, but friendship problems are emotional and personal.

What might the AI say?
"It may be helpful to give your friend space and check in later to discuss your feelings."

When should a human step in?
When emotions or empathy are needed - a real conversation with the friend or a trusted adult will give more meaningful insight than data analysis.

2. Dear AI - Choosing a Future Career

Should this person trust AI's advice?
Not completely. AI can match interests with careers, but it can't understand passion, purpose, or happiness.

What might the AI say?
"Based on your interests and skills, potential careers include accounting, data organization, or research analysis."

When should a human step in?
When exploring motivation, joy, and values - things that come from personal reflection and conversation, not algorithms.

3. Dear AI - The Screen Time Debate

Should this person trust AI's advice?
Probably not - AI can offer data but can't balance family dynamics or personal well-being.

What might the AI say?
"Experts recommend balancing screen use with physical activity and in-person relationships."

When should a human step in?
When setting realistic, family-based rules that consider everyone's feelings and routines - something a machine can't personalize fully.
